QUARTZ LAMPS FOR OVENS • LAMINATORS • ROLLER PRESSES • GLASS CUTTING TABLES

We can supply infrared replacement lamps for processing and production machinery used in the glass industry. We have found welcome customers that have been limited to the original equipment manufacturers (OEM), as their replacement lamp supply. Most often, the OEM purchases lamps with their name and part number from our factories. Less than .05% of all OEM accounts in all industries manufacture their own lamps.

We can guarantee you will be pleasantly surprised with the savings on this fixed cost expense with our price quotation. You will also have a qualified secondary supply source when required.

Please contact us for a special cost evaluation lamp.
